AUTOMATED DATA COLLECTION

SCOREBOARD EYE

Scoreboard data tracker for multiple sports

Scoreboard Eye is an intuitive software that tracks data displayed on any sport scoreboard.

Time and statistics can be presented automatically on a score bug or on other broadcast graphics, in real time.

KEY FEATURES:

- Image filtering
- Tracking algorithms
- Digit recognition
- Camera to data
- Automatically detects invalid scores
- Automatically manages timers, inserts statistics and triggers graphics

WORKING CASE SCENARIOS

COMPLETE SPORTS OPERATION

By integrating with SportStats Suite (wTVision's suite of applications to collect data and generate real-time graphics during sport events) it is possible to start and stop different match clocks, set game periods or insert the most important statistics, like the number of points or number of fouls.

Scoreboard Eye is the perfect complement to any sports operation, once it allows you to extract official data without deploying a dedicated operator

SPORTS SCOREBUG

By integrating with wTVision Sports Scorebug, it is possible to have a bug with time, results and statistics during a live match. Scoreboard Eye does not demand an operator when integrated with your favorite scoreboard.

MAIN BENEFITS

- Works with multiple scoreboards
- Integrates with wTVision's R³ Space Engine and other major graphic engines
- Impacts your viewers' experience
- Fast deployment
- Intuitive and simple operation

Take your sporting event to the next level!
