Basketballstats CG

BASKETBALLSTATS CG

BasketballStats CG is an easy-to-use basketball statistics system that integrates with FIBA LiveStats and NBA Global Stats System, providing real-time broadcast graphics.

Capable of integrating data and detailed statistics from FIBA and NBA LiveStats and turn them into broadcast graphics, wTVision's BasketballStats CG is the choice of some of the world's biggest basketball competitions, such as the AfroBasket, Basketball Championship League, Europe Cup, FIBA 3×3 World Tour or the NBA Abu Dhabi Games.

wTVision's control application has an extremely intuitive and easy-to-use interface and it was specifically designed for Basketball, simplifying any operation and making it more effective.

KEY FEATURES

FIBA and NBA Integration

FIBA LiveStats is a free software application that allows users to record complete basketball statistics in real time.
This software fully compliant with FIBA rules, and allows the user to setup a game end-to-end; including players, coaches and officials from both teams, and collect full game statistics using a simple point and click method. With a valid license number the In Venue feed feature allows our software to connect and receive all game data.
NBA has a similar software - **NBA Global Stats System** - that allows for the same features regarding NBA competitions with which our software connects.

Scoreboard Protocols

Our software may be integrated with official scoreboards. This way, we can provide information such as the time of each quarter, both teams' scores and the shot clock, in real-time, through graphics.

OCR Solutions

BasketballStats CG integrates with wTVision's Scoreboard Eye or any other OCR (Optical Character Recognition) software.
Scoreboard Eye tracks data displayed on any sport scoreboard. Time and statistics can be presented automatically on a score bug or on other broadcast graphics, in real time.
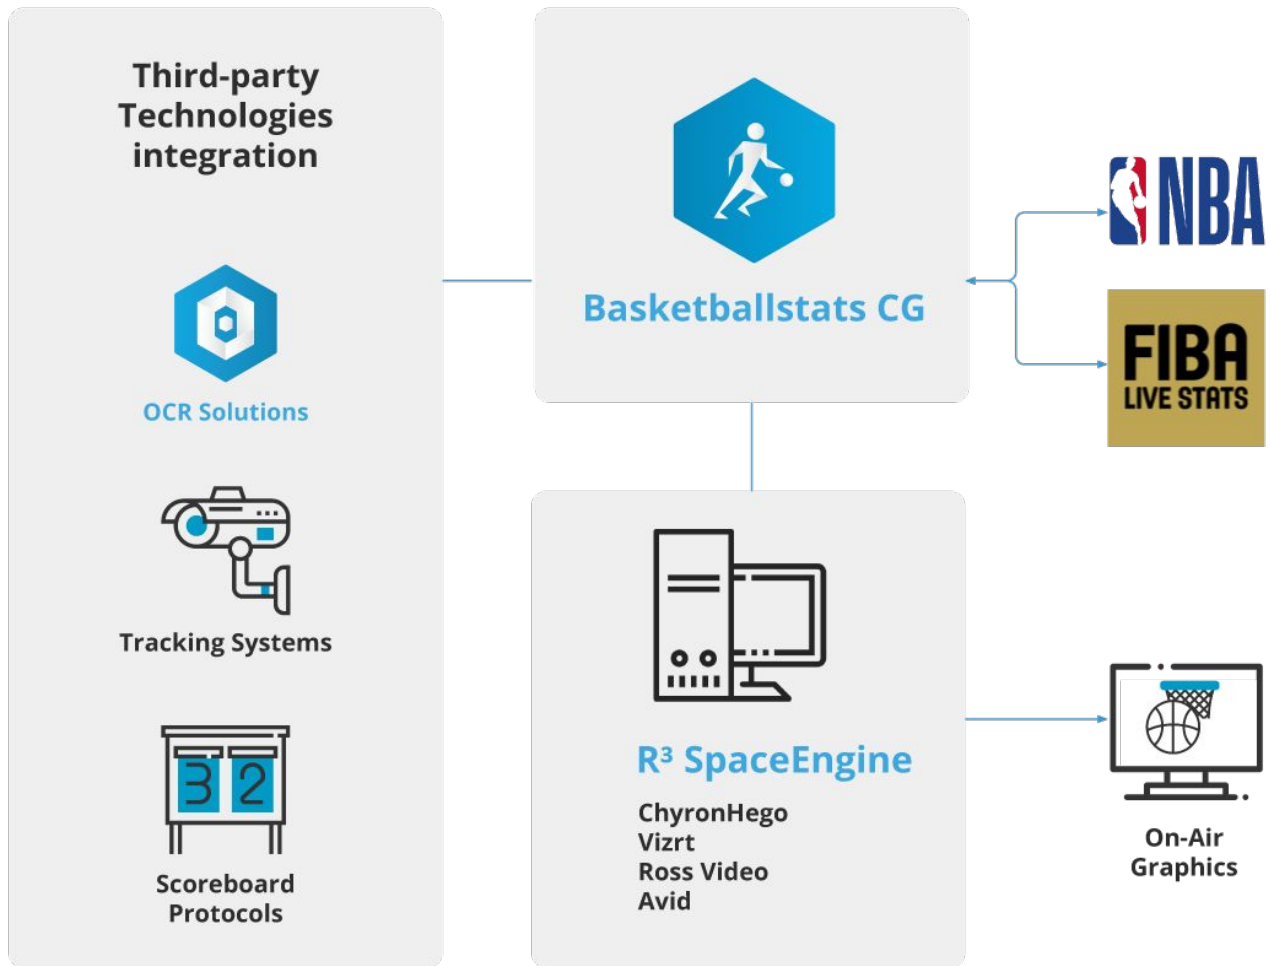

On-Air Graphics

BasketballStats CG ontrols all the major graphics engines in the market (including wTVision's R³ Space Engine) and can automatically generate broadcast graphics/slides suggestions, based on FIBA LiveStats data.

Tracking Systems

wTVision transforms tracking data into powerful graphics enriching any broadcast, allowing you to offer intuitive and insightful information to basketball fans. Some examples: Players on the field, Speed profiles, Pass accuracy, etc.
