GO GET

SOURCE CONTENT FROM EVERYWHERE

GO GET

Go Get is a download management system that lets you source all kinds of internet content into assets available on your local network. Schedule your downloads and transform web content to serve your specific needs.

Whether it is the latest sports results, traffic data or social media content, make sure the content has been safely downloaded into the local network before airing.
Do not compromise your broadcast again, just because your internet connection failed.
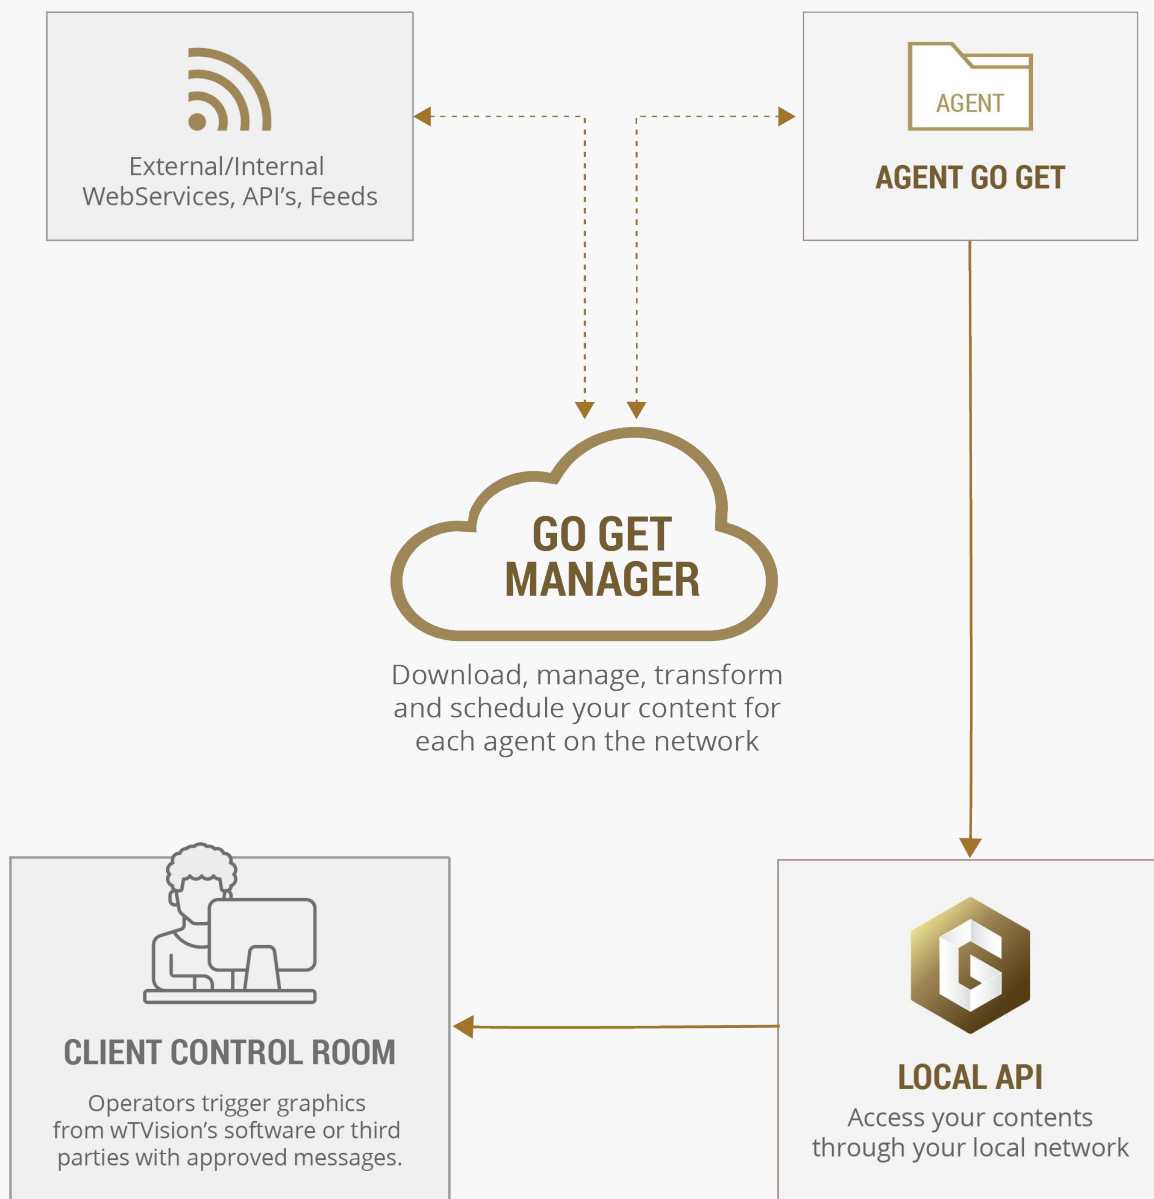

KEY BENEFITS

- Download JSON / XML / HTML / TXT / Images or any custom content from the internet with **Go Get**

- Manage all your sourcing jobs from one centralized cloud based manager

- Locally install one or more **Go Get Agents,** on your network, to execute the sourcing jobs into the local network, ensuring maximum redundancy

- Schedule content downloads at any time and with any periodicity

- Transform, filter and maintain your content to match your workflow needs

- Create your own custom download workflow to fit a specific web service architecture and format

- **Go Get** integrates seamlessly with other wTVision Apps to turn your cloud feeds into local network feeds

- **Go Get** supports intricate multi-level API calls that chain together to reach deeply nested content

- If you want to broadcast user generated media content but want to make sure it is properly downloaded to your local network, **Go Get** works in tandem with **Go Social** to make sure all media is safely stored
